Name _____

Period ___ Date ___/___/___

6 • Energy and Chemical Reactions

PRACTICE TEST

1. A system has an increase in internal energy, ΔE, of 40 kJ. If 20 kJ of work, w, is done on the system, what is the heat change, q?
   a) +60 kJ
   b) +40 kJ
   c) +20 kJ
   d) -20 kJ
   e) -60 kJ

2. A gas at 20 atm pressure with a volume of 2.0 Liters expands against a 5 atm pressure to a volume of 8.0 Liters. How much work is done by the gas?
   a) 30 L·atm
   b) 18 L·atm
   c) 8 L·atm
   d) 5 L·atm

3. Which equation represents the heat of formation, ΔH_f, for $MgCl_2$?
   a) $Mg^{2+}(aq) + 2\ Cl^- \rightarrow MgCl_2(s)$
   b) $Mg(s) + 2\ Cl(g) \rightarrow MgCl_2(s)$
   c) $MgCl_2(s) \rightarrow Mg^{2+}(aq) + 2\ Cl^-(aq)$
   d) $Mg(s) + Cl_2(g) \rightarrow MgCl_2(s)$

4. Take a toy balloon. Quickly stretch the balloon and press it against your lower lip. What is the D**H** for the reaction:

   unstretched ® stretched

   a) +
   b) 0
   c) –
   d) impossible to tell

5. Which of the following is NOT a state function?
   a) pressure
   b) volume
   c) temperature
   d) none of these

6. The correct units for specific heat capacity:
   a) J/°C
   b) J/g
   c) J/g °C
   d) °C/g

7. How much heat is required to convert solid sulfur to gaseous sulfur at 298 K and 1 atm pressure?

	$\Delta H°$ (kJ/mol)
$S(s) + O_2(g) \rightarrow SO_2(g)$	–395
$S(g) + O_2(g) \rightarrow SO_2(g)$	–618

   a) –1013 kJ/mol
   b) –223 kJ/mol
   c) +223 kJ/mol
   d) +618 kJ/mol

8. Using the $\Delta H_f°$ given below, calculate the $\Delta H_{combustion}$ for propane, C_3H_8.

	$\Delta H_f°$ (kJ/mol)
$H_2O(l)$	-286
$CO_2(g)$	-394
$C_3H_8(g)$	-104

   a) 576 kJ
   b) -576 kJ
   c) -2222 kJ
   d) -2330 kJ

9. The heat of vaporization of methane, CH_4, at its boiling point is 9.20 kJ/mol. How much heat energy is required to vaporize 100. g of methane at its boiling point?
   a) 1380 kJ
   b) 86.3 kJ
   c) 21.6 kJ
   d) 57.4 kJ

10. How much energy is required to melt 10.0 g benzene, C_6H_6? The heat of fusion of benzene is 2.37 kJ/mol.
    a) 3.30 kJ
    b) 23.7 kJ
    c) 1850 kJ
    d) 0.303 kJ

11. If ΔH for a reaction is positive, …
    a) the reaction rate is generally very fast.
    b) the enthalpy change of the reverse reaction is positive.
    c) the enthalpy of the products is greater than the enthalpy of the reactants.
    d) the energy released during bond formation is greater than the energy absorbed during bonding breaking for the reaction.

12. Given the two equations:

$2\ S(s) + 3\ O_2(g) \rightarrow 2\ SO_3(g)\quad \Delta H° = -790.4\ kJ$

$SO_2(g) + {}^1/_2\ O_2(g) \rightarrow SO_3(g)\quad \Delta H° = -99.1\ kJ$

What is the standard enthalpy of formation for sulfur dioxide, $SO_2(g)$?

a) +99.1 kJ
c) –592.2 kJ
b) –296.1 kJ
d) –839.5 kJ

13. When 0.100 g benzoic acid ($HC_6H_4CO_2$) and excess oxygen is ignited in a bomb calorimeter, the temperature of the water changes from 25.000°C to 25.225°C. The heat capacity of the calorimeter is 603 J/°C. What is the ΔE for this reaction?

a) -597 J
c) -136 J
b) -1660 J
d) -149 J

14. Under conditions of constant volume, the heat change that occurs during a chemical reaction is equal to

a) ΔH
c) ΔT
b) ΔE
d) ΔP

15. Systems tend toward:
    a) maximum entropy and minimum enthalpy
    b) maximum entropy and maximum enthalpy
    c) minimum entropy and minimum enthalpy
    d) minimum entropy and maximum enthalpy

Answers:

1.	C	6.	C	11.	C
2.	A	7.	C	12.	B
3.	D	8.	C	13.	C
4.	C	9.	D	14.	B
5.	D	10.	D	15.	A

Notes:

1. an increase in internal energy means an increase in P.E. of system by 40 kJ
   work done ON system increases P.E., +20 kJ, so q = +20 kJ, too.
2. work = PΔV = 5 atm x (8-2 L)… the 20 atm is not used for anything.
4. balloon gets warm, ΔH < 0
5. each of these only depends on the STATE of the substance, not on its HISTORY.
7. reverse second reaction
8. recall: $C_3H_8 + 5O_2 \rightarrow 3CO_2 + 4H_2O$ and use Hess's Law
9. Given: 100g CH_4, use molar mass & H_{vap} as conversion factors.
10. Given: 10.0g C_6H_6, use molar mass & Hfus as conversion factors.
11. this is an "uphill" reaction.
12. take half of first equation, reverse second equation. if you reverse and double second equation, you get TWICE the answer.
13. answer = heat capacity x ΔT… you don't use 0.100 g anywhere. You would IF the question asked for MOLAR heat of combustion.
14. if volume is constant, PΔV work = 0 so ΔE=q + w becomes ΔE = q.
15. from lecture… THIS chapter, however, concentrates on enthalpy, ΔH.
